

## Add Workstation Security *While Speeding User Access to PHI in Published Desktops*

**eXpressACCESS** is an innovative solution embraced by clinicians for the ways it streamlines their work, and by executives for the added security it provides to desktop management.

**HealthCast, Inc.** is distinguished by its commitment to healthcare providers, the deep domain knowledge of its engineers and client services teams, and its 100% track record of success.

For information on **eXpressACCESS** alone, or as part of the **eXactACCESS** suite, please call or request a webcast at [www.gohealthcast.com](http://www.gohealthcast.com).

### **eXpressACCESS:**

**eXpressACCESS** replaces the Windows® shell to lock down each workstation so that users can only access desktops published on Citrix® or Windows® Terminal Server. **eXpressACCESS** also automates the start-up of, and access to, each user's terminal session, eliminating the additional login to the terminal session. **eXpressACCESS** enables users to roam their sessions across workstations by disconnecting (not closing) their terminal sessions, so that users can return to their work as they left it on any supported workstation in the enterprise. Automated Privacy Shields (configurable) protect sessions if users are called away without disconnecting their session first.

Users gain additional convenience and security with the unique proximity badge functionality that **eXpressACCESS** provides when it is deployed with badge readers and HealthCast proximity software. It adds proximity badge access with its unique 'tap-in, tap-out, and tap-over' workflow and the convenience of configurable rolling password-save functionality. Now, users need only enter their password once at the beginning of each shift, moving easily among workstations and between departments to access their work as they left it with only the tap of a badge.

**eXpressACCESS** can also be deployed with HealthCast's **eXactACCESS** to add single sign-on and application management features for users. This combination has been called 'the gold standard for physicians', and forms the foundation for successful physician adoption of CPOE.

**When should eXpressACCESS be used?** **eXpressACCESS** locks down workstations to prevent users from inappropriately accessing unauthorized applications (and the Internet), while it streamlines access to a terminal session. It provides 'fat clients' with the same locked-down security as ultra-thin clients and can serve as a bridge solution while older workstations are transitioned out of the organization. **eXpressACCESS** also allows organizations to remove PHI from workstations and securely maintain that information on servers, away from easy access on open workstations. Alone, or in combination with other HealthCast software, **eXpressACCESS** streamlines clinician workflow enabling them to work more securely and efficiently across workstations and giving them more time to spend with their patients.
