

tap ACCESS

Tap-In ▶ Tap-Out ▶ Tap-Over

tapACCESS unique proximity badge software allows nurses and physicians to use the same proximity badge they use for physical access to authenticate to shared workstations. It streamlines the way clinicians interact with computers, providing fast, secure access to a unique session for each user. **tapACCESS** eliminates generic passwords and allows users to secure their session with a tap of their badge promoting HIPAA-compliant behaviors. Its rolling, configurable password-save

feature enables them to move quickly and securely between workstations simply by tapping their badge to lock their session and then pick it up again with another badge tap without re-entering a password.

tapACCESS uniquely offers additional security to badge-enable logical access with Parity Bit Checking, Bit Count Checking, and Facility Code Filtering. These features check the validity of the card data prior to granting logical access.

• Tap-In

- Tap your badge (username is automatically entered)
- Enter your password to authenticate at the beginning of the day

• Enter password one time each day

- With 'password-save', your password is saved for a configurable period of time each time your badge is tapped
- The password-save time 'refreshes' with each tap-in or tap-out event

• Tap-Out

- To quickly lock and secure your session, simply tap your badge again as you leave the workstation
- Tap-out re-starts the 'password-save' time, which allows you to re-access your session by tapping your badge at any workstation without entering your password

• Tap-Over

- If a user forgets to tap-out, simply tap your badge to securely log them off
- Your session will automatically start (after their session is logged off)

Benefits of tapACCESS

- Generic passwords are eliminated
- Simple to deploy and use
- Use the same proximity badges currently in use for physical access
- User compliance with patient data privacy regulations
- Add single sign-on for more functionality

HealthCast, Inc. is distinguished by its commitment to healthcare providers, the deep domain knowledge of its engineers and implementation teams, and its track record of success. **For more information, please contact:**
