

## HealthCare's Enterprise Single Sign-On Solution

eXactACCESS™ (“XA”) is an enterprise single sign-on and clinical workflow solution. It is role-based, directory-centric and architected with a ‘relationship management’ framework. It is a client-server application that automates a single login to legacy, client-server, home-grown, or Web applications in shared and private workstation environments. Application Wrappers manage sign-on, graceful log-off, credential checking, password change management, etc. eXactACCESS

- **Track record of 100% success with application integration.** Unlike others, XA uses a flexible framework that supports a variety of integration approaches.
- **Speeds user access to data within applications.** More than SSO alone, XA can auto launch selected applications at login and its Wrappers can auto-navigate users inside applications to the screen where they wish to begin their work.
- **Empowers users to move between computers and return to their work, exactly as they left it.** XA was the first SSO solution to provide its users with Roaming SSO functionality. Building on this tradition of innovation, XA roams published applications.
- **Enables multiple people to share the same computer securely.** Unique to HealthCast, XA has two other approaches to shared-workstation management - Kiosk mode (fast-user switching at the application level) and Multi-User Sessions mode (fast-user switching at the domain level) - designed to fit different environments. Either mode can also be roamed to provide Roaming SSO.
- **Simplifies administration with ‘live links’ to Active Directory** to automate user management, eliminating tasks in a duplicate credential store.
- **Unique proximity badge feature to speed return to work.** Proximity badge plug-in automates logical access, graceful log-off, and provides a configurable password-save option for users to resume their work simply by swiping their badge.

eXactACCESS is more than an enterprise single sign-on solution - it is designed to address security and workflow challenges cost-effectively in hospitals. It is deployed in large and small organizations - from community hospitals to national hospital systems.

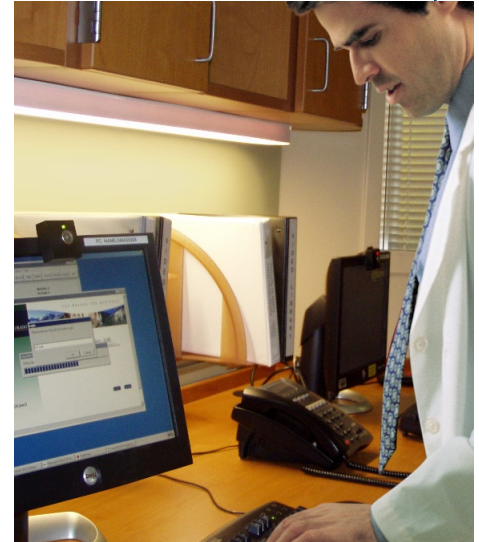

HealthCast is distinguished by its commitment to healthcare providers, the deep domain knowledge of its engineers and implementation teams, and its 100% track record of success.
